What is this product?

Type

The product is a share class of FTGF ClearBridge Global Infrastructure Income Fund (the "Fund") which is part of the Franklin Templeton Global Funds plc, an investment company with variable capital incorporated with limited liability in Ireland and established as an umbrella fund with segregated liability between sub-funds.

Term

The Fund has no maturity date. The Fund could be closed under the conditions laid down in the current prospectus of the Fund.

Objectives

Investment Objective

To seek long-term investment growth, through a combination of income and growth of capital (total return).

Investment Policy

The Fund mainly invests in equities of companies in infrastructure sectors in developed markets, such as utilities, transport, community and social infrastructure, and communications.

To a lesser extent, the fund may invest in equity and equity-related securities in emerging markets. The fund may also have limited exposure to infrastructure-related real estate funds.

Derivatives and techniques The Fund may use derivatives for reducing risks (hedging) and costs, and to generate additional income or growth.

Strategy In a bottom-up process, the investment manager uses Fundamental analysis to select a concentrated portfolio of companies that appear to have a long life span, offer predictable cash flows, have low earnings volatility and benefit from limited competition due to high barriers to entry. It also favours companies that tend to be better protected from inflation.

SFDR category Article 8 (promotes environmental and/or social characteristics under EU regulations).

Share Class Policy

For this share class all, or some portion of, net income is declared and paid quarterly to shareholders.

For this share class, the manager intends to apply a NAV hedge "(Hedged)" which intends to minimize fluctuations between the base currency of the fund and the share class currency.

For this share class certain fees and expenses may be charged to capital rather than income. This will result in an increase in income available for distribution by foregoing some of the capital that the share class would have available for future investment and potential growth. In addition, all or some portion, of realised and unrealised capital gains net of realised and unrealised capital losses may be declared as a dividend.

Buying and selling shares

You may normally buy or sell shares on any day the New York Stock Exchange is open for business.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity to pay you.

These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario

Costs over Time	If you exit after 1 year	If you exit after 5 years
Total costs	159 EUR	966 EUR

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.
