What is this product?

Type

The product is a share class of FTGF Western Asset Multi-Asset Credit Fund (the "Fund") which is part of the Franklin Templeton Global Funds plc, an investment company with variable capital incorporated with limited liability in Ireland and established as an umbrella fund with segregated liability between sub-funds.

Term

The Fund has no maturity date. The Fund could be closed under the conditions laid down in the current prospectus of the Fund.

Objectives

Investment Objective

To seek to maximise income and growth of capital (total return).

Investment Policy

The Fund mainly invests, directly or indirectly through derivatives, in corporate and government bonds, asset- and mortgage-backed securities, interest rates, currencies and debt indices. These investments may be from anywhere in the world, including emerging markets, and some of the bond investments may be of any duration and may be rated investment grade or below investment grade (or comparable).

These investments may include convertible securities, including contingent convertible bonds.

Derivatives and techniques The Fund may extensively use derivatives for reducing risks (hedging) and costs, and to generate additional income or growth.

Strategy The investment manager combines macroeconomic, interest rate and credit analysis to identify securities that appear to offer the best return for their risk level. It may take both long and short positions on individual securities, buying those it appears will increase in price and taking short positions on those it appears will decline in price.

SFDR category Article 6 (does not promote environmental and/or social characteristics or have a sustainable investment objective under EU regulations).

Base currency US dollar (USD).

Benchmark(s) None.

The Fund is actively managed without reference to a benchmark.

Share Class Policy

Income and gains from the Fund's investments are not paid but instead are reflected in the Fund's share price.

For this share class, the manager intends to apply a NAV hedge "(Hedged)" which intends to minimize fluctuations between the base currency of the fund and the share class currency.

Buying and selling shares

You may normally buy or sell shares on any day the New York Stock Exchange is open for business.

Intended retail investor

Investors who understand the risks of the Fund and plan to invest for at least 5 years. The Fund may appeal to investors who:

- are looking for a combination of income and investment growth
- are interested in exposure to global bond markets as part of a diversified portfolio
- have a medium to high risk profile and can tolerate significant short-term changes in the share price

Product availability The Fund is available to all investors with at least basic investment knowledge, through a wide range of distribution channels, with or without the need for advice.

Terms to understand

asset- and mortgage- backed securities: Bonds backed by consumer debt (such as mortgages, credit card and other loan-type debt) and whose income derives from the payments received from the underlying borrowers.

bonds, below investment grade: Bonds represent an obligation to repay a debt, along with interest. Below investment grade bonds generally pay higher interest rates but are considered less likely to make all scheduled payments or repay the initial debt.

convertible securities, contingent convertible bonds: Bonds that convert into shares of a company upon a pre-determined event occurring. Contingent convertible bonds generally pay higher interest payments compared to other bonds due to the higher risk.

derivatives: Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.

emerging markets: Markets of less economically developed nations, such as some nations in Asia, Africa, Eastern Europe and Latin America.

Depositary

What are the risks and what could I get in return?

Risk Indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets.

We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity to pay you.

Be aware of currency risk. In some circumstances, you may receive payment in a different currency, so that the final return you get may depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks materially relevant to the product not included in the summary risk indicator:

For the other risks applicable to this Fund, please refer to the Primary Risks section of the Fund supplement contained within the prospectus of the Fund.

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

Costs over Time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario
- GBP 10 000 is invested

Costs over Time	If you exit after 1 year	If you exit after 5 years
Total costs	13 GBP	67 GBP

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.
